

Use Weather Boards to Warn of Storms

Summer storms with lightning or high winds can pose a serious risk of injury to campers and staff. These storms move quickly and can create a very dangerous environment in a matter of minutes. A great way to inform everyone of approaching storms is by installing a weather board—a simple chalkboard will do—in the dining hall and at the waterfront. Weather boards can be supplemented with lightning detectors and weather radios, but keep in mind that lightning detectors don't always alert you before lightning strikes, and radios are often turned off.
